DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-98, 103-109 and 111, drawn to a gravitational wave generator/detector and communication device, classified in class 969, subclass Dig.419.
 - II. Claims 99-102 and 110 drawn to a gravitational wave propulsion/focusing system, classified in class 310, subclass 301.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility since the refractive control medial for altering gravitational wave direction of invention II are not necessary for operation of the generator/detector and communications device of invention I, which pertains to the generation, detection and use of the gravitational waves. See MPEP § 806.05(d).
2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Response to Amendments

5. The amendment filed 4-24-01 ("Substitute Specification" Paper No.8) is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: p.11, line 30 "or electromagnetic field" is new matter not originally supported; p.13, lines 10-24, and p.13, line 34-p.14, line 6, i.e. "target-mass energizable elements...Alternatively, the energizable nuclear elements could be constrained to a preferred orientation yielding a preferred direction of the collision products and again, a nuclear jerk in a preferred direction..." and "A refractive medium can intercept the oppositely or forward-directed GW and those rays can be bent or refracted..."; and p.17, line 32, "or superconducting coupled microwave cavities"

Applicant is required to cancel the new matter in the reply to this Office Action.

6. The amendment filed April 15, 2002 ("Supplemental Amendment" Paper No.12) will not be entered because it is not clear if the changes are to be made to the substitute specification (not entered) or the original specification. It is requested that applicant make all amendments and changes to the specification collectively so as to avoid confusion.
